Bright Vision IT

Look Forward

The Profile

Who is Bright Vision IT?

Leave it for us and look forward

We at Bright Vision IT empower businesses to achieve their goals by helping them to maintain and modernize their IT infrastructure and solve various infrastructure-specific issues a business may face. We set up and manage the infrastructure of your foundation so you can focus more on your customers.

We provide solutions based on client's requirements as well as recommendations that we propose with technology that 100% fits client's environment with the cost in mind. Our services run along the parameters of protecting your network with the right Antivirus solution along with the best Unified Threat Management (UTM) solution. We also provide the right cloud backup solution to have your data whenever you want. On top of that, we can help expand, trace and revamp your network as well as provide CCTV, access control time attendance, IP Technology and Microsoft solutions, all with continuous support.

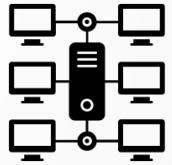

Bright Vision IT aim is not only to do business with its clients, we may also advice them of other companies which provide solutions that are not in our profile. All you need to do is to contact us.

What Services We Provide?

The right option with the best total cost of ownership

We empower our clients with the required tools and solutions to help them protect their network(s) and keep their employees connected and productive.

The decision about which is best to use should be based on what you are protecting and what you can afford. This should then be compared to what the total cost of ownership will be. Our solutions range from UTM, Antivirus, Office 365, Cloud backup up to networking, IP telephony, CCTV, access control and time attendance solutions

We provide many solutions which include the building of completely new networks as well as revamping, expanding and tracing of existing networks for better management.

Protecting the usability and integrity of your network and data should be the main pillar to your business. AV, UTM and cloud backup are solutions of utmost importance.

Each client wants to get the maximum out of his employees. So, they empower them with many tools such as IP telephony, different options of Microsoft365 and cloud backup.

What Services We Provide?

ANTIVIRUS SOLUTIONS

Viruses can be programmed to cause damage to your device, prevent a user from accessing data, or to take control of your computer. These tools are critical for users to have installed and up-to-date because a computer without antivirus software protection might be infected within minutes. The best AV solution is likely to be the one that works well on your system while coming in at a price point that works for your budget. That said, you'll certainly want to stick to software offered by the most well-known companies in the industry, such as Kaspersky, Symantec and Trend Micro.

CLOUD BACKUP SOLUTIONS

The virtual business landscape has grown exponentially in recent years. Businesses are constantly exposed to the risk of data loss or corruption. Organizations of all scales operate with immense volumes of information, meaning that data protection has become a strategic asset. More and more organizations are now choosing cloud-based platforms rather than building a physical DR (disaster recovery) site, due to cost-effectiveness, flexibility, and on-demand scalability that these solutions provide. Cloud backup, if properly organized and executed, can become an invaluable component of your DR process.

What Services We Provide?

UTM SOLUTIONS

Unified threat management (UTM) is a single security appliance, that provides multiple security functions at a single point on the network. it usually includes functions such as: antivirus, anti-spyware, anti-spam, network firewalling, intrusion detection and prevention, content filtering and leak prevention. Some units also provide services such as virtual private network (VPN) support. The solution is based on simplicity, so instead of having individual vendors or appliances for each separate security task, it can now have them all under one vendor, supported by one IT team, and run through one console.

NETWORK SOLUTIONS

Having a neat and organized network is key for your company to increase the performance of your employees and for easier management. We can build your network by providing all required components all the way from cabinets, cables, routers up to servers, access points and data centers. Also, we can revamp or expend your network for better performance and management. Cable tracing and labelling is very important as well. On top of that, we can reconfigure your network components for better performance. All what we need to know is your exact requirements.

What Services We Provide?

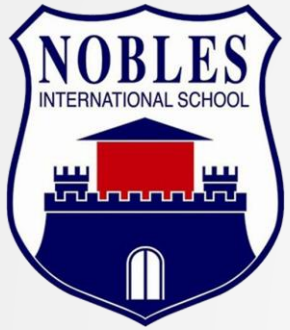

IP TELEPHONY SOLUTIONS

IP telephony refers to any phone system that uses an internet connection to send and receive voice data. Unlike a regular telephone that uses landlines to transmit analog signals, they connect to the Internet via a router and modem. They are now able to offer much more to companies than standard telephone calls. it has ushered in the development of unified communications solutions which can provide a complete communications package all in one, to be ran over a single network. This means that businesses can easily manage calls, use video conferencing, collaborate, chat and more through a single service.

CCTV & ACCESS CONTROL SOLUTIONS

CCTV allows you to keep an eye on what's going on in and around your business. Cameras and monitors enable you to view events live, and recorders archive footage for later reference. Also, access control dictates who's allowed to access and use company info and resources. Its policies make sure users are who they say they are and that they have appropriate access to company data. While, time and attendance systems are used to track and monitor when employees start and stop work. it enables an employer to monitor their employees working hours and late arrivals, early departure and time taken on breaks.
